EDUCATION

Virginia Polytechnic Institute and State University – Virginia Tech

B.S. Business Information Technology

Concentration: Computer Based Decision Support Systems

Cumulative GPA: 3.53 | In-major GPA: 3.68 | 6x Dean's List Recipient

Georgia Institute of Technology – Georgia Tech

M.S. Analytics

Expected Graduation: December 2026

Cumulative GPA: 3.77

WORK EXPERIENCE

KPMG (Advisory – Federal Services) – Tysons Corner, VA

November 2024 - Present

Specialist – Software Engineer | Solution Design and Integration – Engineering Lighthouse

Developer/AI Specialist – International Narcotic and Law Enforcement Agency

- Designed and created a bureau-wide data lake in Snowflake—consolidating and synthesizing application data across international servers along with external sources (custom API integrations and scraped data) into a unified reporting and data discovery system to support the success of international anti-fentanyl and narcotics enforcement missions.
- Created and own integration and data pipelines across 5+ applications with 100+ DAU into the data lake, which streamed data (batches and live updates) and updated Streamlit apps, PowerBI Dashboards, and other custom reporting outputs.

Full-Stack Developer – International Narcotic and Law Enforcement Agency

- Previously as a full-stack developer, modernized a legacy web application supporting international anti-fentanyl and narcotics enforcement missions. Utilized Angular (TypeScript), .NET (C++), and Azure to design, implement, and deploy scalable features, as well as integrate Azure DevOps CI/CD pipelines to enhance release efficiency and reduce technical debt by streamlining deployments and testing.
- Led AI governance across multiple cross-functional teams to accelerate application development. Defined and led objectives to drive feature delivery and ensure alignment with regulatory, end-user, and organizational requirements.

Lead Developer – Federal Health Services Agency

- Lead the development and implementation of Python-based automations, cutting task processing time from 2-5 hours per week per employee to under 2 minutes for varying loads and batch sizes.
- Drove significant operational efficiency and expedited task completion by completing the design and deployment in 912.5 hours out of the 1500 planned hours through technical expertise and quick strategic decisions.
- Served as the technical subject matter expert and primary liaison between the client and internal teams, assuming roles such as Lead Developer, Business Analyst, and Testing Analyst throughout the SDLC, while aligning product delivery with client vision and objectives.

Developer - Business Development Analytics Tool (BDAT)

- Contributing as a developer in building an AI-enabled tool to retrieve, augment, and generate RFX responses using historical proposal material, with the goal of enhancing proposal quality, reducing response time, and increasing government contract win rates.
- Leveraging Python, NLTK, Azure, Tableau, and LLMs (GPT 4o) to surface and reuse relevant past performance and proposal content.

Associate – Software Engineer | Solution Design and Integration – Engineering Lighthouse

Developer – Federal Health Services Agency

- Contributed to the development and deployment of Python-based process automations, helping to streamline manual tasks across various government health services domains and improve operational efficiency.
- Served as the technical liaison between the client and internal team, fulfilling roles such as the Developer, as well as Business Analyst, and Testing Analyst. Supported the maintenance of smooth technical and functional operations throughout the SDLC.
- Contributed to the hypercare and enhancement of existing automation protocols by participating in performance evaluations and suggesting improvements. Provided insights to enhance system efficiency, mitigate risks, and support continuous operational stability.

Undergraduate Teaching Assistant | BIT 4454 Business Analysis Seminar Capstone Class (Blacksburg, VA)**Teaching Assistant - Dr. Alan Abrahams**

- Mentored students in their semester long capstone class in the BIT major after completing course in high standing, through guiding 5 student development teams in building full-stack decision support systems to solve clients' needs.

INTERNSHIPS

KPMG (Advisory – Federal Services)**June 2023 – August 2023****Software Engineering Intern | Solution Design and Integration – Digital Lighthouse (Tysons Corner, VA)**

- Engaged as a full-stack developer to enhance a survey collection and management tool called "Eval", within an enterprise landscape, enabling streamlined data gathering, consolidation, and analytic capabilities with a focus on secure storing of confidential data.
- Leveraged Vue.js, Prisma, TSOA, Postman, Azure DevOps, and Postgres to develop, organize, and deploy several web applications for various use cases across multiple domains.
- Applied SCRUM and Agile methodologies through active participation and leadership in SCRUM ceremonies and contributing to requirements gathering to ensure project efficiency, enhance teamwork, and facilitate timely project deliveries.

KPMG Campus Ambassador | University Talent Acquisition (Blacksburg, VA and Tysons Corner, VA)

- Represent KPMG in events, panels, recruitment, marketing, and networking.

Actualize Consulting**May 2022 – November 2022****Technical Treasury Consultant Intern | Treasury – Technology Advisory (Reston, VA)**

- Created 4 custom API connectors to allow clients to move cash balance and cash flow data from Kyriba (treasury management system) into Google BigQuery and PowerBI to create structured data lakes and visualizations.
- Developed template API connector code to enable customers to connect various Kyriba modules to any other system based on individual client needs.

Sunrise Senior Living**July 2021 – August 2021****Data Analytics Intern | Data Analytics - Information Technology (Tysons Corner, VA)**

- Designed ERDs in Lucid, and created DDL & DML statements to normalize, structure and organize a database in Snowflake, to create a license management dashboard to catalog inactive PowerBI Premium licenses in order to reduce expenses.

Humbler**June 2021 – July 2021****Business Development and Search Engine Optimization (SEO) Intern (New York City, NY and Remote)**

- Supported business development and SEO efforts by processing reports and optimizing the company website to enhance search engine rankings and user experience. Managed website updates, tracked marketing campaign performance, and analyzed outreach effectiveness using Google Analytics to drive growth.

Jetzy**June 2020 – August 2020****Software Engineer – Technology Intern | Technology (Remote)**

- Collaborated in a team to create and integrate an HR Onboarding and Management system to collect and store new employee information using front and back-end technologies using APIs (Google API Console, Postman, Ninox Cloud database, Zapier).

BUSINESS DEVELOPMENT

Department of State Account Data Analytics Lead

- Created and maintain a historical spend and recompute analysis dashboard used by top account executives to enable actionable business development insights in shaping and winning opportunities.
- Contribute to proposal responses, including RFP, RFQ, RFI, and Whitepaper content creation and compliance checks.

Department of Veterans Affairs (VA) – Veterans Benefits Administration (VBA)

- Collaborated in drafting the technical sections of a comprehensive response to the VA's request for information for Fraud Prevention Services, contributing expertise in AI, machine learning, data analytics, and other advanced technologies to address fraud, waste, and abuse (FWA).
- Helped in refining the format, grammar, versioning, and overall voice of the document, ensuring clear communication of KPMG's proposed FWA prevention program and its potential benefits to the VA.
- Gained hands-on experience with the full lifecycle of U.S. Government contracting, from opportunity identification to proposal submission, including the creation of compliant and distinguished proposal/bidding artifacts.

Whitepapers

- Department of State – Bureau of International Narcotics and Law Enforcement Affairs (INL)
 - Authored “*Enhancing the Department of State’s Data Lake Architecture with Palantir Foundry*” which outlined the strategic transformation from siloed applications to an integrated, flexible, and scalable Data Lakehouse architecture, enhancing data accessibility, security, and analytic capabilities. Proposed system design and integration of Palantir Foundry as a key AI enablement layer to streamline data manipulation, improve analytics, and simplify user interactions.

PROJECTS & ACTIVITIES

Mentor to Transitioning Veterans – The Honor Foundation

Fall 2024 – Present

- Mentor Special Operations veterans transitioning to the civilian workforce, providing regular guidance on professional development and technical skills including Python, Excel, cloud computing, and web development.
- Supported successful career transitions, including:
 - Admission of a former Green Beret to the University of Texas – McCombs School of Business MBA program.
 - Placement of a former DIA Executive Officer at ManTech in Defense Intelligence.
 - Placement of a former Air Force Commander at Disney in Supply Chain and Logistics.
 - Placement of a former Senior Operations Manager at Carolina Care and Pallet.

Group Recommendation System for Book Clubs ([presentation link](#))

Spring 2025

- Built a group-aware book recommendation model and platform using item-based collaborative filtering and metadata analysis to generate tailored book recommendations based on club members’ collective reading histories and preferences.
- Designed interactive data visualizations (preference clouds, heat maps, force-directed graphs) to enhance transparency and engagement for book clubs to support both individual and group insights.

Slide ([presentation link](#))

Fall 2024

- Developed an Apple Watch/iPhone app that enables presentation control through hand gestures (pinching) on the smartwatch and an intuitive iPhone interface, eliminating the need for a clicker or remote to wirelessly navigate presentations.

Health Factors Contributing to Diabetes Diagnosis Tool ([presentation link](#))

Fall 2024

- Developed a predictive tool for identifying diabetes risk using a Random Forest model, analyzing key health factors to improve early diagnosis and reduce healthcare costs, achieving 65% accuracy and with supplementary actionable insights for targeted treatment and resource optimization.

Cincinnati Reds Hackathon 2024 ([submission proposal](#))

Spring 2024

- Built a Multiple Linear Regression model using MLB datasets to analyze ideal characteristics of starting and relief pitchers to propose roster adjustments.

23rd and 24th Annual Student Leadership Conference

Fall 2022 and Spring 2023

- Selected to attend conference with industry leading companies and business professionals to grow leadership skills and participate in innovative leadership workshops.

Alpha Kappa Psi – Business Fraternity

Fall 2023 – Spring 2024

Head of Professional Development

- Led and organized professional development initiatives for 50+ students, including workshops, guest speaker events, and networking opportunities, to enhance members' career readiness and skills in areas such as leadership, communication, and industry-specific knowledge.

Founding Member

- Helped establish the business fraternity from 6 to 50+ members, contributing to its mission, recruitment strategies, and development of foundational programs and events, fostering a strong community and setting the stage for long-term growth and success.

Phi Kappa Psi – Social Fraternity

Fall 2020 – Spring 2024

Pledge Class President

- Led and coordinated pledge class activities while fostering camaraderie and serving as a liaison between the pledge class, fraternity leadership, and university officials.

K2M Scoliosis Research

Spring 2017

- Designed a new back brace made of small hexagonal segments, allowing for increased flexibility and minor movement compared to traditional designs, enhancing comfort while effectively correcting spinal curvatures. Collaborated with K2M's CEO and mentors to deliver the final prototype and pitch to a panel of company stakeholders and administrators.

VerityTrac

Fall 2017 – Spring 2018

- Created a startup that developed an app for Mobile Hope Loudoun, using QR codes to create time-stamped verification of court-mandated volunteer hours for students with court-ordered volunteering mandates. The app streamlined tracking between students, schools, and the court system. Successfully pitched the solution to a panel of Loudoun's top business leaders for funding.

Drummer and Sound Engineer

Spring 2010 – Current

Professional Drummer

- Participate in the production, arrangement, and composition of music, focusing on drums and percussion (amongst many instruments). Studied music at all academic levels, specializing in sound engineering and music technology.

CERTIFICATIONS & SKILLS

- **Professional Certifications:** *AI-900 Microsoft Certified: Azure AI Fundamentals* – Microsoft, *Certified SAFe 6 Agilist* – Scaled Agile Framework (SAFe)
- **Technical Skills:** Java, Python, JavaScript, TypeScript, Angular, JQuery, SCSS, pandas, R, HTML, CSS, API, SQL, MySQL, Postgres, Snowflake, Prisma, TSOA, Azure DevOps, Vue.js, Express.js, Node.js, Git, GitHub, PowerBI, Tableau, Postman, Advanced Excel, VBA Excel Macro Programming, M query, BigQuery, Google API Console, Google Analytics, PowerPoint, Word, Outlook, Microsoft Teams, REXX.
- **Proficiencies:** *Full Stack Solutions Developer, Data Architect and Engineer, Data Analytics, Business Intelligence and Analytics, Computational Modeling, Agile-Minded, Leader, Quick Learner, Outgoing, Approachable, Adaptable.*
